

Each SanIndus installation offers on each location the next redundant connections to the network of the organization: 4 times in capacity/redundancy Fiber Channel 2/4/8 Gigabit connections, 4 (of more if needed) times in capacity/redundancy UTP 1 Gigabit copper Ethernet connections, 4 times in capacity/redundancy UTP 10 Gigabit copper Ethernet connections and 4 times in capacity/redundancy 10 Gigabit fiber Ethernet connections. Our installation engineers will advice how to connect networks full redundant to the SanIndus internal (also full redundant) copper/fiber infrastructure.
